EDUCATION

Bangalore Institute of Technology

Bachelor of Engineering (B.E.) in Information Science and Engineering

Bangalore, Karnataka, India

2023–2027 CGPA: 8.5

EXPERIENCE

Freelance Full Stack Developer

Confidential Client (Restaurant / Hospitality Sector)

October 2025 – November 2025

India (Remote)

- Developed a full-stack digital restaurant menu platform with a responsive web interface optimized for mobile, enabling customers to browse items, categories, and pricing seamlessly.
- Built a RESTful backend API using Node.js and Express.js to manage menu items, categories, and pricing with secure CRUD operations and MongoDB integration.
- Designed a modern frontend using React and TailwindCSS with smooth navigation, dynamic menu filtering, and real-time availability updates.
- Implemented database-driven menu management allowing restaurant owners to update items, images, and descriptions without modifying frontend code.

PROJECTS

ChatFolio | AI-Assisted Resume Builder

- Built a local-first AI resume builder using React and Redux Toolkit with a chat-based workflow that collects resume info and generates structured JSON updates applied directly to the store.
- Integrated an AI chat assistant (Gemini / OpenRouter) that iteratively gathers Profile, Experience, Education, Skills, and Projects sections for structured resume generation.
- Engineered client-side PDF generation using React-PDF with resume import/parsing, enabling users to generate, edit, and export professional resumes entirely in the browser.

TripVerseAI | AI-Powered Travel Planning & Booking Platform

- Built a full-stack AI-driven travel platform using Next.js and React that enables users to explore destinations, generate personalized itineraries, and plan trips seamlessly.
- Developed AI-powered itinerary generation using LLM APIs (OpenRouter/Gemini) to provide customized travel plans based on user preferences like budget, duration, and mood.
- Integrated Firebase Authentication and Razorpay for secure login and subscription-based payments.

TasteFlix | AI-Powered Movie Recommendation Platform

- Built a full-stack movie recommendation platform using React and Node.js that delivers personalized movie suggestions based on user taste, preferences, and similarity scoring.
- Implemented an explainable recommendation system that highlights why a movie is suggested using genre matching, similarity scores, and user history.
- Engineered a robust trailer integration system using TMDB + YouTube APIs with intelligent fallback logic and filtering to ensure accurate trailers for 90%+ movies.

SKILLS

Full-Stack Development: JavaScript (ES6+), TypeScript, React.js, Next.js, Node.js, Express.js, Redux Toolkit, REST APIs, HTML5, CSS3, TailwindCSS, Responsive Design, Authentication (JWT, Firebase), MongoDB, PostgreSQL, API Integration, State Management, Client-Side Architecture

DevOps & Tools: Git, Docker, Vercel, Linux, CI/CD, Environment Variables

AI & ML: LLM Integrations (Google Gemini, OpenRouter), Prompt Engineering, AI Workflow Design, Conversational AI Systems, Structured JSON Generation, Recommendation Systems, Explainable AI, Ollama API, React-PDF, Data Parsing
